# CoofHea2 Cooperation for Health 2

## MIS 5146074

# About CoofHea2

To effectively mitigate the profound implications of the post C19 pandemic era, specifically on the Greece Italy Programme territory, the adoption of a common approach between the two countries is imperative.

## Focus

CoofHea2 is an EU co-funded collaborative project focused on the creation of a cross border networking initiative, which will provide a systematic approach to the needs of the involved territories, via a combination of strategic actions.

## Goal

To build capacity for knowledge mobilization and sharing, considering pending legal restrictions in both countries, while focusing on sustainability.

## Objectives

- to provide a response to post-covid era
- to create a solid and permanent network between Puglia, Ionian Islands, Epirus and Western Greece health systems.

# Outputs

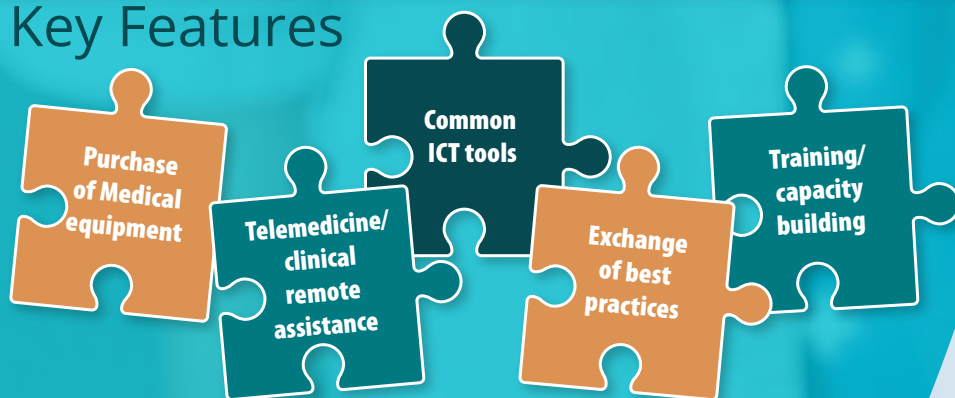

- Purchase of **medical equipment**
- Building of a **sustainable cross-border network** in healthcare
- **Sharing** experiences for health home care between Greek and Italian health systems, via the e-health platforms for clinical remote assistance
- **Training** courses for the staff of the project partners, experts & health professionals to build capacity for knowledge mobilization and sharing
- Development of the **eHealthPass platform, the mHealth application & web collaboration platform**, to support digital health services, collaboration and exchange of best practices
- **Study** on the elaboration of on-line tools related to Covid-19, to develop research and policy making related to the use of clinical remote assistance during the pandemic

# CoofHea2 Tools

- **eHealthPass platform:** A patient centered platform that enables treatment planning and monitoring, emergency support and geolocation, with a focus on patient consent and privacy. It constitutes a valuable tool for the immediate and safe management of Covid-19 patients, during and after the period of illness, via digital and telemetry functions.
- **Web-collaboration platform:** Implementation of a common environment to enhance cooperation. The platform will be used among participating hospitals in the project, to access scientific studies and good practices aiming to optimize cooperation and transfer of know-how.
- **mHealth application:** A scientific mobile platform where health professionals can exchange best practices on issues related to infection and prevention of Covid-19.

“A strategic vision placing healthcare services user in the center of an innovative process of technology integration”
